High-Security | Modular Walling

Composite High-Security Systems:

We can offer a bespoke and personally tailored light-weight solution to your secure building needs. This High-Security Composite Panelling System is rapidly installed and offers a significant reduction in labour costs, site downtime and on-site trades due to its click in joints and pre-finished appearance which comes in a wide range of standard colours and textures.

We can take the stress and delay out of your build by offering a complimentary Security Design Package into every project, detailing secure installation methods and ensuring the interfaces between composite panelling and doors, windows, ventilation and service penetrations are inbuilt and secure.

This is a demountable, lightweight and space-saving system which also provides excellent fire and thermal efficiency. Walling Systems and Enclosures can be used to create new buildings, superstructures and can also be retrofit into existing buildings to security harden specifically identified areas.

Through utilising our in-house design team, we are able to offer a Stage and Gate sign off process ensuring that high security and physical resistance are inbuilt into every bespoke project.

We have a team of dedicated Project and Account Managers on hand, who will act as a constant single point of contact and ensure your project runs smoothly and is delivered on time.

All of our Modular Security Walling solutions are installed by our in-house team of engineers who have a wealth of experience to ensure that our clients receive an exceptional security service, completed with the utmost professionalism and efficiency.
