Access Control | Paxton 10

The Paxton 10 system combines next-generation Access Control with Video Management on one user-friendly, online interface, allowing you to manage the security of your premises with ease!

This system allows for complete control over access to your entire premises, whilst simultaneously being able to view and record video footage of what happens on-site. The Access Control side of the system provides the ability for you to decide who has access to your building, and when, ensuring that unauthorised access cannot be gained.

All doors on the system will lock automatically and will only open when an authorised access token is presented. Should a forced entry attempt be made, the surveillance cameras will capture the event and alert the system administrator.

One server for the Paxton 10 can support up to 1000 doors across multiple sites, and it supports both camera and door management from a single controller, making this a not only a highly cost-effective solution but an extremely simple and easy to navigate system as well. With zero configuration required for the Paxton 10 camera, server and controllers, this makes for a highly efficient installation – which is carried out by our fully trained and qualified in-house team.

The system can also be integrated with existing systems such as Z-Wave and BACnet. Z-Wave a wireless-based home automation system for controlling and automating lights and appliances. It can be used as a security system or to monitor and control your property remotely & BACnet is a communication protocol for Building Automation and Control networks that leverage the ASHRAE, ANSI, and ISO 16484-5 standard protocol.

Paxton10

Through the ability to integrate your Paxton 10 system with both Z-Wave and BACnet, should you already have these in place in your property, this further enhances the combined security management system, providing additional peace of mind that your site can be managed with ease from one server.

The Paxton 10 System Includes:

- Complete door entry solution
- Wireless door handles
- Integrated user-friendly apps
- Security cameras
- Door & video controllers
- Desktop readers
- Keypad readers
- Slimline access readers
- VR readers
