

## UK Manufactured | Safe Deposit Boxes

Utilise space inside your Strongroom by installing our highly secure Safe Deposit Boxes, the ideal solution for the storage of valuables. The systems we supply are manufactured bespoke to meet the clients requirements and preferences, ensuring we can provide the ideal solution for all Safe Deposit Storage needs.

There are different height columns to suit the internal height of the room, and with the lockers manufactured totally bespoke to your needs, you can be sure the appropriate sizing is chosen for your needs. The columns are free standing, but bolted together in place, to form a full wall.

- Constructed from high quality 10mm steel
- Different locker heights available from 50mm -300mm in 25mm increments
- Manual and Automated locking options available
- Each deposit box is operated by two keys
- Various colour options available

### Manual Locking

We provide the traditional two key system, whereby the client is accompanied by a member of staff on each occasion. We also provide this with a biometric recognition and access control database system to allow monitored access by staff and clients to the locker room. The client and customer have a key each, and together they unlock the customers box. The locker has its own metal lockable cassette inside in which to keep their property. The customer has a choice of RAL colour to suit their requirements.

### Automated Locking

We also provide an automated locker system whereby the customer can be allowed to enter the locker room unaccompanied. This is also linked to an access control database. The use of biometrics allow the locker to be opened with only the customer key. This system comes as standard with cardboard fibre cassettes, but metal cassettes are an option. The finish of these lockers are generally brushed satin steel.

\* 5 year warranty is subject to T & C's. Full details available on request
