Perimeter Security | Shutters

Where higher levels of security are the main concern, our LPS1175 approved Security Shutter resists attempts at forced entry from SR1 right up to SR4 to combat the most determined perpetrator.

Our High-Security Shutters are individually designed and manufactured to suit the specific opening using stylish laths, which are much more attractive than conventional sections.

A wide variety of curtains and guide sections are available which are dependent on the level of security rating required. Shutter curtains are constructed from either traditional steel laths, extruded aluminium or aluminium insulated lath dependent on the security rating required.

All curtains are securely held using an end lock to suit the curtain configuration which prevents lateral movement.

Traditional steel lath is available in perforated finish (SR1 only). The aluminium lath is available in punch and/or punched and glazed (SR1 only). Our Security Shutters are finished off with either a heavy-duty roll-formed 'T' section (SR1 & SR2 only) or mill finished extruded aluminium bottom rail.

Our High-Security Shutters are fitted with two bullet locks and for shutters over 5000 mm wide, (SR4) a ground lock is fitted to the bottom rail for added protection against levering and jacking.

With the option to have either manual or electronic functioning Security Shutters, we can provide the ideal solution for your individual security needs, ensuring that you receive a secure solution that perfectly matches the required functionality of your premises.
