

## Perimeter Security | Window Bars

Security Window Bars offer a simple yet effective security solution and can be utilised for many applications, including both Domestic and Commercial premises. Due to the ability to manufacture these to multiple security standards, certified by the LPCB to LPS 1175: Issue 7 SR2, SR3 and SR4, these Window Bars offer a high-security solution for a vast array of premises, ensuring a range of security needs can be met.

Our Window Bars can be installed either internally or externally to your premises, allowing for all of our clients to achieve a secure solution against possible attacks or threats.

Our internal installations can be completed either within the window reveal or over the face of the window, or a combination of both. With their highly versatile design, they are suitable for all site conditions and can be tailored to suit your premises needs directly.

Our unique design means there is no frame around the grill, a sturdy fixing bracket slides inside the tube ensuring no unsightly gaps are left between the grill and the wall. This not only looks much better but also alleviates any gaps for tools to be used to prise off the grill in any attack.

With expert installation carried out by our in-house team of engineers, we can provide assurance that fitting is carried out with the utmost efficiency, professionalism and expertise.
